### WAIVER OF RIGHT TO FILE A REQUEST FOR REHEARING: AMENDMENT OF CLAIMS IN VIEW OF BOARD'S DECISION

Dear Sir:

We have received the Decision of the Board of Patent Appeals and Interferences related to the applicant's appeal of the final rejection of claims 1 through 7, 13 through 15, 17 through 21, and 23 through 25. In response thereto, applicant hereby waives his right to request a rehearing (within 30 days under §41.127(d)) of the Board's decision to sustain the rejection of claims 13 through 15, 17, 19, 20, 21, 23, and 25.

Applicant appreciates the Board's decision refusing to sustain the rejection of claims 1 through 7, 18, and 24. Applicant requests entry of the attached "Listing of Claims", wherein claims 18 and 24 have been rewritten in independent form to include all of the

#### **CERTIFICATE OF TRANSMISSION (37 CFR 1.8a)**

I hereby certify that this correspondence is being facsimile transmitted to the United States Patent and Trademark Office, via Fax No. 571-273-8300, on July /6\_\_, 2008.

Mary Gaskin

limitations of the base claims (13 and 20, respectively). Further, applicant has cancelled the claims for which the Examiner's rejections were sustained.

Upon entry of the amendment, allowance of claims 1 through 7, 18 and 24 should be in order and is respectfully requested.

Date: July 16, 2008

Respectfully submitted,

Mary J. Caskin

### LISTING OF CLAIMS

- 1. (Previously presented) An electronic response device other than a personal computer, the response device configured to allow a user to send data over a standard communication system in response to a program received apart from the response device, the response device comprising:
  - a user input mechanism for entry of user input and responses, the

    mechanism operating without receiving signals eliciting a response by
    the user:
  - means for requiring the user's input of a program identifier code for the program received apart from the response device;
  - means for providing a user identifier code, the means selected from the group consisting of having the user identifier code associated with the response device and having the user input the user identifier code;
  - a central processing unit (CPU) for correlating the responses the user has entered into the user input mechanism to the program identifier code and for processing the program identifier code, the user identifier code, and responses the user has entered into the user input mechanism:
  - a power source; and
  - a transmitter connected to the CPU.
- 2. (Previously presented) The electronic response device according to claim 1, wherein:
  the input mechanism is selected from the group consisting of a key pad and

### voice recognition apparatus;

the transmitter comprises a two-way paging device; and the communication system comprises a two-way paging system.

- 3. (Previously presented) The electronic response device according to claim 1, wherein: the input mechanism is selected from the group consisting of a key pad and voice recognition apparatus;
  - the transmitter is configured to send data bursts over standard telephone lines; and

the communication system comprises a plain old telephone system.

- 4. (Previously presented) The electronic response device according to claim 1 wherein: the input mechanism is selected from the group consisting of a key pad and voice recognition apparatus;
  - the transmitter is configured to call telephone numbers each of the telephone numbers having been associated with a particular response to the program; and

the communication system comprises a plain old telephone system.

- 5. (previously presented) The electronic response device according to claim 1, wherein: the input mechanism is selected from the group consisting of a key pad and voice recognition apparatus;
  - the transmitter comprises a wireless internet protocol device; and the communication system comprises an internet protocol system.
- 6. (Previously presented) The electronic response device according to claim 5, wherein:

the internet protocol system further communicates with a telecommunication system.

7 (Previously presented) The electronic response device according to claim 1, further comprising:

an indicator for indicating the connection status of the electronic response device to the communication system.

8 - 17. (Cancelled)

18. (Currently amended) The method of claim 13 A method for receiving and processing responses to a program selected from the group consisting of a radio broadcast, a television broadcast, an internet broadcast, a satellite communication, an audio tape, a video tape, and a live performance, the method comprising:

providing a program identifier code for the program;

providing means for identifying an audience member;

providing a user input device other than a personal computer, the device operating without receiving signals eliciting a response by the audience member:

having the audience member input the program identifier code into the user input device;

having the audience member input responses into the user input device:

transmitting response data comprising the program identifier code, the

means for identifying an audience member, and the responses over

a standard communication system, wherein the standard

communication system utilizes telephone lines and equipment and the response data is transmitted by having the user input device call a pre-assigned telephone number associated with the input response data;

collecting the response data at a central location;

correlating the program identifier code to the responses;

processing the response data.

19 - 23 (Cancelled)

24. The system of claim 20 A system for receiving and processing responses to a program selected from the group consisting of a radio broadcast, a television broadcast, an internet broadcast, a satellite communication, an audio tape, a video tape, and a live performance, the system comprising:

providing a program identifier code for the program being presented;

providing a user input device other than a personal computer, the device

generating without receiving signals eliciting a response by a user;

having an audience member input the program identifier code into the user input device;

having the audience member input responses into the user input device;

transmitting the program identifier code and the responses associated with

a user identifier over a standard communication system, wherein the

standard communication system utilizes telephone lines and
equipment and the responses are transmitted by having the user input

device call a pre-assigned telephone number associated with the input responses;

collecting, correlating, and processing the program identifier and the responses;

routing the responses to a program presenter.

25. (Cancelled)
